

Utkarsh Thaokar

DevOps & Cloud Engineer

Pune, India · +91 96891 96091 · thaokarutkarsh@gmail.com · linkedin.com/in/utkarshthaokar · github.com/utk1106

SUMMARY

DevOps & Cloud Engineer with 4.5 years across AWS and Azure, with hands-on depth in Terraform and Bicep infrastructure-as-code, CI/CD automation (GitLab CI, GitHub Actions, Azure DevOps), and containerized delivery with Docker. Built and maintained enterprise Azure infrastructure for a global Oil & Gas client, owned end-to-end deployment pipelines with blue-green releases, and stood up monitoring and security controls for compliance-sensitive systems. Recently built a GenAI feature: an LLM tool-use concierge (Anthropic Claude), grounded in a real search backend, integrated into a production-style FastAPI app. Immediate joiner.

SKILLS

Cloud (AWS): Lambda, API Gateway, Step Functions, SQS/SNS, S3, CloudFront, VPC, Cognito, Route 53, SES

Cloud (Azure): Azure DevOps, Azure Monitor, Key Vault, Private Endpoints, ADLS Gen2

Infrastructure as Code: Terraform, CloudFormation, SAM, CDK, Bicep, ARM, Ansible, PowerShell

CI/CD: GitHub Actions (OIDC federation), GitLab CI/CD, Azure DevOps, Jenkins (familiar)

Containers & Orchestration: Docker, Docker Compose, Kubernetes (k3s homelab), Helm

Observability & Reliability: CloudWatch, Azure Monitor, Prometheus, Grafana, ELK Stack, SLOs/MTTR, chaos & load testing, on-call incident response

Databases & Scripting: DynamoDB (single-table design), PostgreSQL / RDS, Python, Bash / Shell, Linux

Security & Access: IAM least-privilege, Secrets Manager, secret rotation, Azure Key Vault, RBAC

AI / GenAI: Anthropic Claude API, LLM tool-use / function calling, structured-output generation, retrieval-grounded (non-hallucinated) responses

PROFESSIONAL EXPERIENCE

DevOps Engineer, Netnology Solutions Pvt. Ltd.

03/2025 – Present · Pune

- Sole DevOps owner of a ground-up platform: built the CI/CD, containerization, and deployment automation from scratch with no prior infrastructure in place.
- Designed modular GitLab CI/CD pipelines with automated build, test, and deploy stages across 5+ environments, replacing a fully manual release process.
- Containerized the full stack with Docker and Docker Compose, enforcing dev/staging/prod parity that eliminated most environment-drift deployment failures.
- Implemented centralized logging with the ELK Stack (Elasticsearch, Logstash, Kibana), aggregating container and application logs into Elasticsearch and building Kibana dashboards that replaced manual per-container log-diving with a single searchable view for faster incident diagnosis.
- Built AWS deployment pipelines for the Python (FastAPI) and Java backend services with automated rollback and health-check gating on every release.
- Standardized deployments as version-controlled, reviewable infrastructure-as-documentation used across engineering, product, and QA.

Site Reliability Engineer, Triguna Legal

02/2024 – 02/2025 · Pune

- Built monitoring and alerting from zero (infrastructure health, latency, anomaly detection) for a compliance-sensitive legal environment, moving incident response from reactive to proactive.
- Implemented RBAC and data-protection controls across systems handling sensitive legal data, and passed 3 external security audits with no critical findings.
- Hardened network security (segmentation, firewall policy, VPN, endpoint hardening) to meet client-mandated security standards.

Cloud Consultant, Rapid Circle

03/2022 – 01/2024 · Pune

Azure data-platform delivery for a global Oil & Gas client (Shell, Amsterdam): data science & BI teams

- Re-engineered a global Oil & Gas client's Azure estate, migrating an existing ARM, Bicep, and PowerShell provisioning setup to modular, standardized Terraform IaC managed in Azure DevOps.
- Diagnosed recurring Terraform state drift and built drift detection with alerting, cutting unplanned configuration failures and making the managed environments materially more reliable.
- Built and migrated the client's production CI/CD from Azure DevOps to GitHub Actions, automating build, test, and deployment for the Azure data platform with zero-downtime blue-green releases.
- Secured Azure environments (Key Vault, Private Endpoints, ADLS Gen2, storage) for secrets management and enterprise data-governance compliance.
- Led production monitoring and on-call incident response for the client's Azure data platform, standing up Azure Monitor and custom alerts that surfaced deployment and infrastructure issues proactively, before they reached the data teams.

PROJECTS

The Film Fraternity: full-stack platform (Docker, CI, GenAI)

- Containerized a FastAPI + PostgreSQL application with Docker Compose for full dev/prod parity; new contributors run the whole stack locally in under 10 minutes.
- Designed the PostgreSQL schema (profiles, project listings, collaboration) with indexing and normalization; maintained CI discipline with Git and Agile workflows.
- Built an AI concierge feature using the Anthropic Claude API with tool-use / function calling: the model turns a natural-language request ("a drone in Miami under \$150/day") into structured search filters, executes them against the app's existing listing-search service, and writes a reply grounded only in real results, never inventing a listing.

EDUCATION

Bachelor of Information Technology, Savitribai Phule Pune University (SPPU) · CGPA 7.74 · 2022

CERTIFICATIONS

Oracle Certified Professional: Java SE Programmer (1Z0-808) · 2023

LANGUAGES

English · Hindi · Marathi
